

The elements of the field hospital are packed so they can be shipped by almost any means of transportation. The largest packed unit (the expandable element) only measures 144 by 84 inches, with a 96 inch height and weighs 4000 to 7000

pounds, depending on equipment included to tailor the element to a specific mission. All elements are self-contained and skid mounted with lifting, towing provisions and attach points for a transporter. Elements can be transported on a M-35 truck.

TRANSPORTATION AND HANDLING

THE "MUST" ELEMENTS CAN BE PACKED AND READY FOR SHIPMENT ANYTIME, ANYWHERE IN THE WORLD, BY ALMOST ANY MEANS OF TRANSPORTATION.

snow train

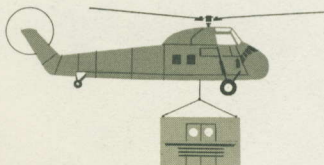

air transport

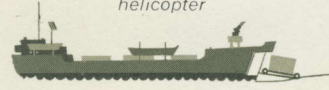

railroad

truck

helicopter

ship
